PROFESSIONAL SUMMARY

Full-Stack Developer with 8+ months of production experience in Django, React.js, and REST API development. Delivered 4 scalable web applications across domains including multi-vendor platforms, academic management systems, and blockchain-secured voting. Skilled in RBAC authentication, ORM-driven database design, MVC architecture, and Agile collaborative development.

WORK EXPERIENCE

Full Stack Developer Intern | Hexcent Pvt Ltd

Jun 2025 – Feb 2026

- Developed and deployed 5+ full-stack features using Django REST Framework and React.js within an Agile SDLC, reducing API response time by 20% through ORM query optimization.
- Engineered 8 RESTful API endpoints with JWT-based authentication and integrated them into React.js frontend, cutting cross-functional integration time by 30%.
- Debugged and resolved 15+ critical issues across backend (Django/Python) and frontend (React.js/JavaScript), improving application stability by 25%.

Web3 & Blockchain Intern | Zindot Innovation

Jul 2023 – Aug 2023

- Implemented 3 Solidity smart contract modules with transaction validation logic for a decentralized application (dApp), applying blockchain concepts to real-world use cases.
- Evaluated 5 blockchain development tools including Hardhat and Web3.js; documented architecture findings and applied results directly to an e-voting system.

PROJECTS

E-Voting Web Application using Blockchain Technologies | *Django · Python · Blockchain · Solidity · SQLite*

- Architected a tamper-proof e-voting platform using blockchain data structures and cryptographic vote verification, supporting 100+ concurrent submissions with full audit trails.
- Eliminated single-authority control by implementing decentralized vote integrity — reducing result manipulation risk to zero.

EduNexus – Academic Networking & Placement Management System | *Django · Python · MySQL · RBAC · JWT*

- Engineered a 3-role web portal (student, faculty, alumni) with RBAC-enforced session authentication and isolated permission sets, supporting 200+ simulated user accounts.
- Delivered 4 integrated modules — placement tracking, event coordination, alumni networking, and notifications — within a single scalable MVC architecture.

Domio – Multi-Vendor Rental Booking & Management System | *Django · Python · MySQL · Bootstrap 5 · RBAC*

- Designed and deployed a scalable multi-vendor rental marketplace with 10+ vendor dashboards, dynamic routing, and RBAC access control using modular Django architecture.
- Optimized database queries via Django ORM, reducing average page load time by 35% and improving overall application performance.

TECHNICAL SKILLS

Languages: Python, JavaScript

Frameworks: Django, React.js, Django REST Framework

Web Technologies: HTML5, CSS3, Bootstrap 5, Responsive Design

Databases: MySQL, SQLite, Database Design, ORM

Auth & Security: JWT, RBAC, Session Authentication, Role-Based Access Control

Blockchain: Solidity, Smart Contracts, dApps, Web3.js, Hardhat

Tools & Practices: Git, GitHub, REST API, MVC Architecture, SDLC, Debugging, Version Control

EDUCATION

JCT College of Engineering and Technology, Coimbatore

2021 – 2025

B.Tech – Computer Science & Business Systems | CGPA: 7.4

Sree Narayana Public School, Kollengode

2020 – 2021

Higher Secondary – Computer Science | Score: 70%
